19116

COUNTY  
Philadelphia

**SUMMARY:** The Budd Company dump was a disposal area used from 1950-1968 by the company. Materials which may have been disposed there include hydraulic fluid, xylene, toluene, mineral spirits, and kerosene. Analytical results from 1980 show high levels of PCBs on site. Budd Company carried out a cleanup which was completed in December 1980. However, further EPA sampling in August 1981 still showed high levels of PCBs on site. This spurred Budd Company into conducting their own sampling of the major area of concern. Their results only showed PCBs up to 9 ppm in onsite soils.

RECOMMENDED ACTION

Further Investigative Action Needed

\_\_\_\_ Site Reconnaissance

\_\_\_\_ Screening Site Investigation

\_\_\_\_ Listing Site Investigation

\_\_\_\_ HRS

\_\_\_\_ Other (specify) \_\_\_\_\_

No Further Action Needed at This Time Due to

\_\_\_\_ No evidence of hazardous waste

\_\_\_\_ Will be addressed by other program or agency  
(explain in "Comments")

HRS score would be below cutoff value  
(explain in "Comments")

\_\_\_\_ HRS score would be above cutoff value but no  
further action recommended (explain in "Comments")

\_\_\_\_ Other (specify) \_\_\_\_\_

**COMMENTS:** Although there may be some residual contamination left on-site, the HRS score would be below the cutoff value and therefore no further action by EPA should be taken at this time. The low HRS score is mainly due to lack of a target population within 3 miles of the site. The entire area is serviced by a municipal water supply with no wells or intakes within 3 miles. I am referring this site to PA DER for consideration under their future Superfund program due to the possibility of the existence of residual hazardous substances on site.
